NetSuite makes it easy to track landed cost by allowing you to allocate expenses to inventory receipts according to weight, value or quantity. These allocated costs become part of the item's asset value. Then, when you sell, landed cost is used as the basis for cost of goods sold, and your inventory profitability report will compare revenue to landed cost rather than material cost.

- Improve cost management and profitability by automatically calculating landed cost
- Allocate expenses to inventory receipts according to weight, value and quantity
- Refine profitability forecasts by comparing revenue to landed cost, not just material cost
- Flexibly assign different pricing based on customers, channels and locations
- Automatically generate correct currency, rate and pricing for foreign customers.

Pick, Pack and Ship

NetSuite allows you to track order fulfillments as they go through three phases—picking, packing and shipment. This is particularly useful in high-volume order processing environments, when these different tasks are performed by different employees and at different times. Separate queues for action display orders that are waiting to be picked, packed or shipped out. With pick, pack and ship management and visibility, you can always easily know the status of your customer orders.

Bar Coding

NetSuite enables you to print bar codes with transaction numbers on sales orders, packing slips and invoices. When combined with any bar code scanner that functions as an input device, order entry and processing is made significantly faster. Plus, you can scan product bar codes to add them to transactions, or scan transaction numbers during activities such as sales order fulfillment, and printing packing slips or shipping labels.

- Bar code support for order and item fulfillment
- Item bar coding
- Item label printing
- Transaction bar coding
- Supports bar code scanning.

Integrated UPS, FedEx and USPS with Tracking

NetSuite integration lets you manage UPS, FedEx and USPS shipping right within NetSuite. Put an end to toggling and cutting and pasting between systems by printing shipping labels, generating tracking numbers, validating destination addresses, and checking real-time rates all from within NetSuite. Tracking numbers automatically tie back to your sales orders, allowing you or your customers to track the status of shipments instantly.
